Summary

I have over 17 years of experience in the field of Software Quality Assurance. Throughout my career, I have worked extensively with the Software Development Life Cycle (SDLC) and have led the implementation of internationally recognized standards such as CMMI Level 5 and ISO across organizations. As part of this journey, I have trained and mentored colleagues on integrating these standards into their day-to-day work, helping teams consistently improve the quality of their deliverables.

In addition, I have significant experience in software validation and testing. I have played key roles in testing initiatives for both national and international software companies, delivering solutions across diverse domains—from large financial institutions to tourism and resource exploration. This broad exposure has equipped me with the confidence and adaptability to support any organization seeking robust quality assurance and quality control practices in their software development processes.

Skills

- **CMMI Level 5** – Experienced in working within CMMI L5 processes to ensure continuous process improvement and high-quality software delivery.
- **ISO 9001** – Knowledgeable in implementing and maintaining ISO 9001 quality management system standards in software projects.
- **Internal Audit on Software Quality** – Conducted internal audits to assess compliance with quality standards, processes, and improvement areas.
- **End-to-End Software Automation (Cypress, Playwright, Selenium)** – Designed and executed end-to-end automated test frameworks using Cypress, Playwright, and Selenium.
- **Manual Testing** – Performed detailed manual testing to identify functional, usability, and edge-case defects.
- **Requirement Analysis** – Analyzed business and technical requirements to ensure clear, testable, and traceable specifications.
- **Conduct UAT** – Planned and supported User Acceptance Testing to validate system readiness against business expectations.
- **User Training on Quality Standards** – Delivered training sessions to users and teams on quality standards, processes, and best practices.

- **System, Regression, and Smoke Testing** – Executed system, regression, and smoke testing to ensure application stability and functionality.
- **Writing Test Cases** – Created clear, comprehensive, and traceable test cases aligned with requirements and risk areas.
- **Writing Test Reports** – Prepared detailed test reports summarizing execution status, defects, and quality metrics.
- **QA Team Management** – Led and managed QA teams by planning tasks, mentoring team members, and ensuring timely test delivery.
